

FLOOR PROTECTORS

BELL 206B, 206L Series and 407

Helifab's floor protectors provide protection from dent damage and fluids that can cause premature replacement of the cabin and crew floor panel. The protectors are constructed of a durable yet lightweight, slip-resistant rubber compound that will not crack like existing products currently available.

The trim to fit feature allows each installer to tailor fit the protectors to their existing configuration for unmatched compatibility with existing equipment installations. Optional foam pads installed under the cabin floor protectors for additional dent damage protection are also available.

FLOOR PROTECTORS
