

AUTOMATIC BAGGAGE DOOR OPENER

BELL 212,412, 412EP

Helifab's Baggage Door installation holds the tail boom baggage door open to facilitate loading and unloading. This installation replaces a brass chain installed by the manufacture that acts as door stop.

This installation installs a pneumatic actuator on Bell Models 212 and 412 series helicopters with a composite tail boom baggage door.

The actuator connects to mounts installed on the baggage compartment ceiling and compartment door.

The installation controls the rate of opening and prevents the door from opening past normal open position and helps prevent damage to the door and airframe.

AUTOMATIC BAGGAGE DOOR OPENER

Part Number:	5230-01-01 Baggage Door Actuator Kit
Weight Of Kit	1.5 lbs / 0.68kg
Kit Availability	5 Days
Installation Time	4 hours (does not include cure time for insert installation)
Flight Manual Supplement	No
